OLE Automation: Objects can be operated through OLE Automation. ObjectARX: Third-party object and methods can be used from native AutoCAD to implement custom behavior on the objects. This includes file open, cut, and paste. Services (Internet Explorer, Windows): Internet Explorer and Microsoft Windows can be used to programmatically interact with AutoCAD. DataTips (Internet Explorer, Windows): DataTips provide a way to provide custom content or more details about a product or a document that is relevant to the current state of the application COM (Windows): COM Automation allows programs such as AutoCAD to be controlled through COM communication. WebServices (Internet Explorer, Windows): WebServices allow AutoCAD to be controlled remotely through the Internet. WebDAV (Internet Explorer, Windows): WebDAV allows AutoCAD to be controlled remotely over a WebDAV server. AutoCAD was originally developed to write proprietary add-on applications. This has given way to more open development methods, which include: WebDAV: WebDAV (Web Distributed Authoring and Versioning) is a standard for distributing and publishing content over a network. WebDAV provides a mechanism for transporting information from one computer to another over the World Wide Web using an HTTP server and HTTP messages. Web Services: Web Services are interfaces to Web services, which allow remote control and communication between applications. Web Services are typically specified by standards such as OASIS WS-* and Microsoft WS-*. XML: XML (extensible markup language) is a standard for representing data objects. A document in XML is built of many elements and other data types. XML is used by Autodesk, and other programs, as a way to share data between computer programs. XML Workbench: XML Workbench is a standalone tool that is designed for working with XML documents. XML Workbench provides a graphical user interface for editing XML documents, adding content to an XML document, searching for content in an XML document, and generating documentation from an XML document. Java: Java is a programming language that runs on top of the Java Virtual Machine. It is an object-oriented language that is used to develop high-level applications for the Java platform, or to extend the capabilities of applications written in other languages. Azerbaijani Foreign Minister Elmar Mammadyarov said that the third-party inspections of territories controlled by the Azerbaijani side and the search for human rights defenders in occupied territories are in no way an aggression against Armenia. "The failure to cooperate with Azerbaijan in the humanitarian sphere, which is enshrined in the international laws, is a clear aggression against Azerbaijan," he said in comments to reporters after talks with his Armenian counterpart Zohrab Mnatsakanyan in Yerevan. According to Mammadyarov, the Azerbaijani government will continue to raise the issue of the search for the missing Azerbaijani citizens in occupied territories. The Azerbaijani foreign minister said that Yerevan supports Azerbaijan's territorial integrity, but expressed regret over Armenia's unwillingness to cooperate in the search for the missing Azerbaijanis. "It is necessary to find the missing people. Azerbaijan is ready to take its own initiatives to find them and continue cooperating with Armenia," Mammadyarov said. Mnatsakanyan said that the issue of missing Azerbaijanis is related to the conduct of both countries. The Azeri foreign minister stressed that the restoration of the territorial integrity of Azerbaijan will be possible only if Armenia signs the Istanbul Declaration on the Nagorno-Karabakh conflict. The Azerbaijani foreign minister also said that the crisis over the use of the Gharabagh plain in the Nagorno-Karabakh region by the Armenian Armed Forces shows that the policy of non-solution of the conflict has failed. In his words, this policy is undermining the interests of the people of both countries. "The use of this area by the Armenian side is not an isolated event and does not concern only the Azerbaijani people. This is a new and dangerous

Automatic placement of measurements using grid-based technology. And more new features... Use the New Insert and Delete Commands: With the new Insert command, you can insert directly into the drawing canvas and a number of different objects, such as text and groups. With the Delete command, you can select objects and the system will offer to delete them. By attaching a digital signature to the drawing (not the drawing template), you can sign a drawing document or its properties (like locked or checkbox enabled). This signature document is used to attach metadata to the drawing. Support for any Microsoft Word formatting (e.g., paragraph formatting). Import Shape & Graphics: Import and insert shapes and graphics in just a few clicks. Also, keep the annotations you create in a separate layer, and use them with other drawings. (video: 1:00 min.) Text components are now based on text layers. So you can set the same text color and style for components in different parts of a drawing, such as labels in one area and tabs in another. In the previous version of AutoCAD, you had to set each component's color and style separately. Now components have color, style and outline in one layer. Groups: Groups have a new highlight color. If you change the highlight color, the change will affect all the components in the group. Groups have new annotation properties that you can use to assign attributes to specific components. Attributes can be applied to groups, but not individual components. Complex shape editing: You can now delete or edit more complex shapes with the Direct Selection tool. The Direct Selection tool has new features to make it more convenient for drawing complex shapes. For example, with the Selection Path tool you can quickly create and edit the shape of a closed ring, where the new points appear as you turn the path. In addition, you can use the Select Paths tool to create a single closed loop path. Then you can create multiple closed loops (each of which can be different sizes), edit them as needed and export the result as an editable shape. You can then duplicate the shape as many times as you need. Other Improvements: Open files in tabs. (Please wait until you see this new feature in action.) You can now quickly and easily restore an
