Another \$20 huh? No thanks. Its waaaay too expensive. All they need to do is give it a discount and it would be much more reasonable and I would actually consider buying it. I doubt it will be discounted because of how big of an investment it is for the devs. I'm making a smartass comment but without a single sale of the collection on steam it's safe to say that the quality of the games is not stellar. Let's see. The Windows games are black (no trackball pointer) and crash when closed.

The Linux games have no mouse and are incredibly laggy.
